Information about browsers:

These sites ought to function well on recent versions of commonly used browsers and on different devices and platforms (e.g. PCs running on Windows, iPads on iOS, Tablets on Android, and various smart phones).

However, different browsers (with different settings and/or add-ons) can result in certain systems, or functionality within systems, not operating correctly.

Users are therefore encouraged to download more than one browser onto their device and, should a problem be encountered when using a specific browser, to then try accessing...
Construction innovation is an important but contested concept, both in industry practice and academic reflection and research. A fundamental reason for this is the nature of the construction industry itself: the industry and the value creation activities taking place there are multi-disciplinary, heterogeneous, distributed, and often fragmented.

This book takes a new approach to construction innovation, revealing different perspectives in a broader context. It coalesces multiple theoretical and practice-based views into a single worked example to stimulate reflection and to prepare the ground for further synthesis. By being broadly unambiguous and specific to the most basic definitions, it can mobilise a plurality of perspectives on innovation to promote fresh thinking on how it can be studied, enabled, mobilised, and propagated across the industry.

Property tax assessment incentive for green building: Energy saving based-model

by S.A. Shazmin, I. Sopian, M. Sagon, M. M Ali, F. Raji

Article 2017 | Peer-reviewed | No other editions or formats
Source: Energy v122 (20170301) 329-339

The practice of providing property tax assessment incentives within the green building sector has been empirically documented to encourage the growth of green buildings. However, to define... Read More
